Question 107

Suppose X follows an exponential distribution with parameter $\lambda > 0$. Fix $a > 0$. Define the random variable Y by

$Y = k, \quad$ if $ka \le X < (k+1)\,a$,

$k = 0, 1, 2 \ldots$

Which of the following statements are correct?

1) $\Pr(4 < Y < 5) = 0$
2) Y follows an Exponential distribution
3) Y follows a Geometric distribution
4) Y follows a Poisson distribution

Solution

Definition. Y takes only the value of positive integers defined by

$$Y = \left\{ k \quad ka \le X < (k+1)\,a \right. \tag{0.0.1}$$

for $k = 0, 1, 2 \ldots$ and $a > 0$

Definition. X follows an exponential distribution with parameter $\lambda > 0$.Therefore, the P.D.F of X, i.e, $f_X(x)$ is given by

$$f_X(x) = \begin{cases} \lambda e^{-\lambda x} & x \ge 0 \\ 0 & x < 0 \end{cases} \tag{0.0.2}$$

Relation between X and Y for $k = 0, 1, 2 \ldots$ and $a > 0$ is given by

$$Y = k \qquad ka \le X < (k+1)\,a \tag{0.0.3}$$

Lemma 1. The P.M.F of Y is given by

$$\Pr(Y = k) = \Pr(ka \le X < (k+1)\,a) \tag{0.0.4}$$

Proof. Let us now find out which distribution Y follows by using (0.0.4) in *Lemma* 1

$$\Pr(Y = k) = \Pr(ka \le X < (k+1)\,a) \tag{0.0.5}$$

$$= \int_{ka}^{(k+1)a} f_X(x)\,dx \tag{0.0.6}$$

$$= \int_{ka}^{(k+1)a} \lambda e^{-\lambda x} dx \tag{0.0.7}$$

$$= \left[-e^{-\lambda x} \right]_{ka}^{(k+1)a} \tag{0.0.8}$$

$$\Pr(Y = k) = e^{-a\lambda k}\left(1 - e^{-a\lambda}\right) \tag{0.0.9}$$

Let $p = \left(1 - e^{-a\lambda}\right)$ in the above equation

$$\Pr(Y = k) = \left(e^{-a\lambda}\right)^k \left(1 - e^{-a\lambda}\right) \tag{0.0.10}$$

$$\Pr(Y = k) = \left(1 - \left(1 - e^{-a\lambda}\right)\right)^k \left(1 - e^{-a\lambda}\right) \tag{0.0.11}$$

$$\Pr(Y = k) = (1-p)^k\, p \qquad k = 0, 1, 2 \ldots \tag{0.0.12}$$

□

From (0.0.1), Y doesn't take any value in $(4, 5)$. Therefore, option

1) $\Pr(4 < Y < 5) = 0$ is correct.

From (0.0.12), we can say that Y follows ***Geometric Distribution***.

Therefore, options

2) Y **follows an Exponential distribution** &

4) Y **follows a Poisson distribution** are wrong and option

3) Y **follows a Geometric distribution** is correct.
