## **QUESTION 107**

Suppose X follows an exponential distribution with parameter  $\lambda > 0$ . Fix a > 0. Define the random variable Y by

if  $ka \le X < (k+1)a$ , Y = k,  $k = 0, 1, 2 \dots$ 

Which of the following statements are correct?

- 1) Pr(4 < Y < 5) = 0
- 2) Y follows an Exponential distribution
- 3) Y follows a Geometric distribution
- 4) Y follows a Poisson distribution

### Solution

Definition. Y takes only the value of positive integers defined by

$$Y = \begin{cases} k & ka \le X < (k+1)a \end{cases}$$
 (0.0.1)

for k = 0, 1, 2... and a > 0

Definition. X follows an exponential distribution with parameter  $\lambda > 0$ . Therefore, the P.D.F of X, i.e,  $f_X(x)$  is given by

$$f_X(x) = \begin{cases} \lambda e^{-\lambda x} & x \ge 0\\ 0 & x < 0 \end{cases}$$
 (0.0.2)

Relation between X and Y for k = 0, 1, 2... and a > 0 is given by

$$Y = k$$
  $ka \le X < (k+1)a$  (0.0.3)

Lemma 1. The P.M.F of Y,  $p_Y(k)$  is given by

$$p_Y(k) = \Pr(Y = k)$$
 (0.0.4)

From (0.0.1),

$$Pr(Y = k) = Pr(ka \le X < (k+1)a)$$
 (0.0.5)

And Y follows **Geometric Distribution**, for some p, defined by

$$Pr(Y = k) = (1 - p)^k p$$
  $k = 0, 1, 2...$  (0.0.6)

Proof. Let us now prove (0.0.6) from (0.0.5) in Lemma 1

$$\Pr(Y = k) = \Pr(ka \le X < (k+1)a)$$
 (0.0.7)

$$= \int_{ka}^{(k+1)a} f_X(x) \, dx \tag{0.0.8}$$

$$= \int_{ka}^{(k+1)a} \lambda e^{-\lambda x} dx \qquad (0.0.9)$$

$$= \left[ -e^{-\lambda x} \right]_{ka}^{(k+1)a} \tag{0.0.10}$$

$$= \left[ -e^{-\lambda x} \right]_{ka}^{(k+1)a}$$

$$= \left[ -e^{-\lambda x} \right]_{ka}^{(k+1)a}$$

$$(0.0.10)$$

$$\Pr(Y = k) = e^{-a\lambda k} \left( 1 - e^{-a\lambda} \right)$$

$$(0.0.11)$$

Let  $p = (1 - e^{-a\lambda})$  in the above equation

$$\Pr(Y = k) = (e^{-a\lambda})^k (1 - e^{-a\lambda})$$
 (0.0.12)

$$\Pr(Y = k) = (1 - (1 - e^{-a\lambda}))^k (1 - e^{-a\lambda})$$
 (0.0.13)

$$Pr(Y = k) = (1 - p)^k p$$
  $k = 0, 1, 2...$  (0.0.14)

From (0.0.1), Y doesn't take any value in (4,5). Therefore, option

1) Pr(4 < Y < 5) = 0 is correct.

From (0.0.14), we can say that Y follows **Geometric** Distribution.

Therefore, options

- 2) Y follows an Exponential distribution &
- 4) Y follows a Poisson distribution are wrong and option
- 3) Y follows a Geometric distribution is correct.
